BIONIC BALL
WHAT YOU NEED
STEP 1: Cut elastic string to desired length. Tie string around two holes in the ball directly beside each other. Tie secure knot.

Tip: Insert pencil or other object from opposite side of the ball to guide string through exit hole.
STEP 2: Tie a loop knot at the end of the string. Put loop around student’s wrist, ball in hand, and throw!
That’s it! Challenge students with limited fine motor skills to retrieve ball by grasping and pulling string in.
